

CIS 21031 – PRACTICAL FOR PLATFORM TECHNOLOGIES
DEPARTMENT OF ICT
FACULTY OF TECHNOLOGY
SOUTH EASTERN UNIVERSITY

Date: 27.02.2024

Continuous Assessment-02

Question 1:

1. Create a *Bourne Again Shell (BASH)* script that would perform the functions of a simple calculator with the features of arithmetic operations depending upon the user input.

- I. Read the first number from the user.
- II. Read the second number from the user.
- III. Display the following functions list and request the user to enter their choice to perform as next
 - a. Addition
 - b. Subtraction
 - c. Multiplication
 - d. Division
 - e. MOD
- IV. Calculate and display the results of the selected operation by the user in part III.

Example: If the first number entered by user is 10, the second number entered by user is 27, and the user select 1st option a , then your script should display the result 37.

By running the script your output should be as follows:

```
nusky@nusky-virtual-machine:~/platform/ca2$ chmod +x calc.sh
nusky@nusky-virtual-machine:~/platform/ca2$ ./calc.sh
Welcome to the Simple Calculator
Enter the first number: 10
Enter the second number(Your registraion number last 02 Digits): 27
Choose an operation:
a. Addition
b. Subtraction
c. Multiplication
d. Division
e. Modulus
Enter your choice (a-e): a
Result: 37
```

Note:-

- You can choose any number for first input
- second input should be your last 02 digits of your registration number
- Perform the output all 05 choices (a-e)

Question 2:

1. Write a function called *recursiveFunction()* to count the numbers until 10.
2. The Fibonacci Sequence is the series of numbers: 0,1,1,2,3,5,..... The sequence is found by adding up the two numbers before it. Write a recursive function to determine the Fibonacci sequence of 10 numbers.
